

Based on 50 sources

Geometric Form	Dimensionality	Categorical Classification	Deformation Parameter	Holonomy
Quantum torus	Naive: n ; Homotopic: 0 to $n - 1$	NCAlgebra	Irrational	Quasi-Disc
Quantum torus (Extended/Torsional)	16D to 32D (Sedenion/Trigintaduonion)	NCAlgebras (Morphic torsion / Non-associative)	Rational or Irrational (q as Čech 1-cocycle)	G_2 spin mod
Quantum torus ($T^2_{R,\theta}$)	Naive: 1; Homotopic: 2	NCAlgebras / Stacks	Rational vs. Irrational	Finit Infin grou
Non-commutative torus	n (Metric dimension)	Smooth NC n -torus algebra / C^* -algebra	Irrational (Matrix Θ)	Quasi Unit
Calibrated stack	Naive: $2n$; Homotopic: n	Category of Sheaves / Stacks	Rational	Full Trivi
Calibrated stack (Sheaf/Topos)	Naive: Discrete levels λ_i ; Homotopic: Long exact sequence	Stacks (Grothendieck topos)	Rational (Discrete energy levels)	Recu Grou U_{Di} SU_l
